Professional Summary

SDET with 3+ years building scalable test automation frameworks in Python, Java, and TypeScript across web, mobile (iOS/Android), API, and backend systems. Experienced in UAT coordination, defect triage, and release readiness across fintech, healthcare, and enterprise domains. Built an autonomous AI-powered testing agent using LLMs and applies AI-driven workflows to test case generation, prompt validation, and hallucination detection. Strong in CI/CD integration, performance testing, mobile automation (Appium), and cross-functional stakeholder communication.

Experience

Solution Consultant – QA / Test Automation

Test Yantra Global

Feb 2026 – Present
Remote, United States

- Built data-driven test automation frameworks in Python and Java with unit, integration, and API test suites, increasing automated coverage from 35% to 70% across 4+ concurrent client accounts in healthcare, fintech, and ERP domains
- Led UAT planning, test design, and execution for Salesforce-integrated healthcare referral workflows, including shadow DOM handling, multi-step patient intake flows, and end-to-end regression validation
- Configured and executed mobile automation for Android and iOS using Appium and cloud device farms, delivering cross-platform demos with parallel execution across real devices and emulators
- Validated AI-enabled platform features by designing test cases for prompt/response evaluation, model behavior checks, and hallucination detection, identifying 30+ regression defects across quarterly updates
- Integrated test suites into Jenkins and GitHub Actions CI/CD pipelines, enabling smoke and regression runs on every PR and maintaining a 95% on-time release rate
- Owned defect triage and root-cause analysis using Jira, providing quality metrics, defect trend reports, and go/no-go recommendations to stakeholders for release readiness decisions

Applied Data Scientist – Mercedes-Benz USA

Georgia State University Industry Practicum

Aug 2025 – Dec 2025
Atlanta, GA

- Built end-to-end validation pipelines in Python for a multi-modal RAG system, testing data retrieval accuracy, response relevance, and confidence scoring across enterprise dealer datasets, reducing retrieval time by 65%
- Designed automated regression test suites using pytest to verify data quality and LLM output stability through model update cycles, tracking bias metrics and hallucination rates across prompt variations

Applied Data Scientist – Shepherd Center & Dell Technologies

Georgia State University Industry Practicum

Jan 2024 – Dec 2025
Atlanta, GA

- Engineered automated ETL validation pipelines in Python and SQL for Shepherd Center, implementing data integrity checks across ingestion, transformation, and output stages that cut manual processing time by 50%
- Built model evaluation test suites in PyTorch for Dell Technologies, verifying data pipeline outputs and 92% link-prediction accuracy using MRR and Hits@K metrics across training iterations

Software Engineer – QA Automation

FireFlink

Aug 2022 – Jul 2024
Bengaluru, India

- Led a team of 4 QA engineers, conducting code reviews, mentoring junior engineers, and owning stakeholder communication that improved on-time delivery by 30%
- Built scalable test automation frameworks covering unit, integration, regression, and API testing using Java, Selenium, and REST Assured, integrated into Jenkins CI/CD pipelines, cutting validation time by 50%
- Designed and executed mobile test automation for Android and iOS using Appium, managing device configurations, capability setup, and cross-platform execution across real devices and emulators
- Implemented API contract testing and service virtualization to decouple test environments from third-party dependencies, enabling parallel execution and faster feedback loops
- Created UAT test plans, test cases, and traceability matrices from business requirements; executed performance and load testing using JMeter to validate system reliability under high-volume scenarios

Education

Georgia State University – MS in Data Science and Analytics, GPA: 4.0/4.0

Dec 2025

Visvesvaraya Technological University – BE in Information Science and Engineering, GPA: 3.4/4.0

May 2022

Projects

AI Test Case Generator

GitHub

Built autonomous testing agent using Node.js, Playwright, and Anthropic API to capture page snapshots and auto-generate end-to-end test cases in NLP-compatible syntax, reducing manual test authoring effort and enabling rapid coverage expansion

TalentXAI: Voice-Enabled AI Career Platform

GitHub

Validated multi-agent AI workflows on AWS Bedrock; implemented confidence scoring and evaluation pipelines to detect hallucinations, prompt failures, and regression across agent handoffs and voice transcription (Polly, Transcribe)

Technical Skills

Languages & Frameworks: Python, Java, JavaScript, TypeScript, pytest, JUnit, TestNG, Selenium, Playwright, Cucumber, Appium
Mobile & API Testing: Appium (Android/iOS), Device Farm, Parallel Execution, REST Assured, Postman, GraphQL, Contract Testing, Service Virtualization
Data & Backend: SQL, PostgreSQL, MongoDB, ETL Validation, Data Integrity Checks, Data Pipeline Testing
CI/CD & Performance: Jenkins, GitHub Actions, Git, Docker, Kubernetes, JMeter, k6, AWS, GCP
AI & QA Tools: LLM/Prompt Validation, RAG Testing, Hallucination Detection, Agentic Testing, AI Test Case Generation, Jira, Qase
Domains: Healthcare, Fintech, Core Banking, CRM/ERP (Salesforce, Odoo), Network Security, OTT Platforms
